AASHIMA GUPTA

+61413763033 | aashima91.gupta@gmail.com | Melbourne, VIC | LinkedIn | Permanent Resident | Portfolio

Operations Data Analyst: Databricks Certified Data Engineer skilled in Power BI, SQL, BigQuery and star schema modelling, with 4+ years on Databricks and Azure.

SELECT ACHIEVEMENTS:

- Data professional with **4+ years in data engineering** and current analytics internship experience, turning raw data into reliable dashboards and insights with SQL, Power BI and BigQuery.
- **Dashboards and insights:** Designed star schema models and Power BI dashboards with DAX on TDAI survey and GA4 website data, querying GA4 event data in GCP BigQuery with SQL.
- **Data quality at scale:** Orchestrated 120+ daily ETL and ELT workflows at 99.8% reliability, processing 200+ GB a day with automated validation and reconciliation.
- **Data modelling:** Designed dimensional models with SCD Type 1 and 2 supporting analytics across **15M+ customer profiles and 300M+ transaction records**.

WORK EXPERIENCE

Operations Data Analyst (Internship) **Jul 2026 - Present**

THE DATA & AI INSTITUTE (TDAI)

Melbourne

Australian data and AI training institute pairing an analytics program with hands-on internships on real business data.

- Turn TDAI's LinkedIn, survey and website data into clean datasets, dashboards and insights for the institute's leadership and marketing teams.
- Analysed 238 LinkedIn posts in Excel through data cleaning, wrangling and EDA, finding that student success stories drove 10% higher engagement.
- Built a Power BI survey dashboard with DAX on Google Forms and Google Sheets data, covering 172 responses and replacing manual summaries.
- Queried GA4 event data in GCP BigQuery with SQL and built a Power BI report on traffic sources, engagement and conversions.
- Designed star schema data models with fact and dimension tables and a shared date dimension, validating every raw export before analysis.

Data Engineer **Feb 2023 - Aug 2023**

COGNIZANT

Melbourne

Global professional services firm modernising clients in Banking, Insurance and Retail through cloud, data and AI.

- Built and ran enterprise CDC pipelines with Fivetran HVR, Databricks and Delta Live Tables, feeding an Azure Lakehouse for business and analytics teams.
- Designed a high-throughput ingestion architecture handling **billions of CDC events per month** with consistent, reliable delivery.
- Automated Bronze, Silver and Gold Medallion pipelines with DLT expectations, schema enforcement, automated testing, monitoring and alerting.
- Established a data quality framework of validation rules, reconciliation and metadata checks, sustaining **99%+ platform reliability** with PII masking and lineage for audit compliance.
- Strengthened releases through GitHub branching, automated testing and Azure DevOps CI/CD, reducing deployment time by 40%.

Data Engineer **Dec 2021 - Aug 2022**

FULCRUM DIGITAL

PUNE

Digital transformation firm delivering cloud, data platform, automation and AI services to global enterprises.

- Built cloud-native data solutions on Azure Data Factory, Databricks and ADLS for enterprise data platform modernisation programmes.
- Developed ETL and ELT ingestion from flat files, APIs, relational databases and third-party systems, onboarding multiple source systems.
- Created a reusable Bronze ingestion framework with schema evolution, lineage tracking and automated reconciliation, cutting source onboarding from 5 to 2 days.
- Delivered Silver transformations and Gold dimensional models with SCD Type 1 and 2, giving BI teams analytics-ready datasets for 20+ reports.
- Applied data masking and quality rules across datasets, securing credentials in Azure Key Vault and deploying through Azure DevOps CI/CD.

Data Engineer **July 2019 - Nov 2021**

HCLTECH

PUNE

Global technology company delivering cloud, AI and data transformation across Banking, Insurance and Healthcare.

- Designed and ran enterprise data pipelines on Databricks, Spark and Azure Data Lake Storage supplying customer analytics and reporting datasets.
- Processed **200+ GB of daily ingestion** through Delta Lake Medallion pipelines with automated schema validation, reconciliation and PII masking.
- Modelled fact and dimension tables with SCD Type 1 and 2 for **15M+ customer profiles and 300M+ transactions**.
- Improved query performance by **40 to 60%** through Spark tuning, partitioning, caching and Delta table optimisation.

System Engineer **June 2016 - July 2019**

TATA CONSULTANCY SERVICES (TCS)

PUNE

Global IT services leader whose BFSI unit, its largest vertical, serves some of the world's largest financial institutions.

- Developed and maintained Android and Java digital banking applications for BFSI clients within Agile Scrum delivery teams.
- Built secure REST API integrations with token-based authentication between mobile apps and banking systems.
- Delivered an insurance proof of concept with a premium calculation engine and risk assessment rules in 2 weeks.
- Wrote JUnit and Mockito unit tests and reusable integration components, reducing API integration effort by 30%.

RELEVANT PORTFOLIO

TDAI GA4 Website Analytics | THE DATA & AI INSTITUTE

- TDAI needed a clear view of where website visitors came from and how they engaged with the site.
- Queried GA4 event data in GCP BigQuery with SQL, modelled it as a star schema and built a Power BI report on traffic sources, engagement, top pages and sales & revenue.
- Tracked $300K+ in website payments tracked by product, and over half of visitors leaving the payment page without paying.

TDAI Survey Analytics Dashboard | THE DATA & AI INSTITUTE

- Survey feedback collected in Google Forms was summarised by hand, making trends hard to track.
- Cleaned responses in Google Sheets and built a star schema model and Power BI dashboard with DAX measures.
- Gave the team an interactive view of all responses, cutting reporting time by 60%.

Insurance Claims Lakehouse [GitHub] **| PERSONAL PROJECT**

- Claims data from 8 JSON and CSV sources (policies, payments, weather, fraud scores) needed integrating to analyse claim speed and risk.
- Built an incremental Medallion pipeline on Databricks with Auto Loader, PySpark, Delta Lake and Unity Catalog, run as a 32-task job deployed through Databricks Asset Bundles.
- Delivered a star schema of 4 dimensions and 4 fact tables with deterministic surrogate keys and hashed PII, guarded by about 55 automated data quality checks.

BikeMart Data Warehouse [GitHub] **| PERSONAL PROJECT**

- A bike retailer's CRM and ERP data across 6 source files needed a reliable, business-ready warehouse.
- Built Bronze, Silver and Gold layers in Spark SQL and PySpark, modelled a snowflake schema and deployed it with Databricks Asset Bundles and GitHub Actions CI/CD.
- Added referential integrity and surrogate key checks that gate every run, and fixed a silent bug zeroing valid sales rows.

CORE COMPETENCIES

- **Analytics and BI:** Power BI, DAX, Excel (Power Query, PivotTables), Google Sheets, Google Analytics 4, EDA, Data Visualisation
- **Data Engineering:** Databricks, Apache Spark, PySpark, Spark SQL, Delta Lake, Delta Live Tables, Fivetran HVR
- **Cloud and Orchestration:** GCP BigQuery, Azure Data Factory, Azure Data Lake Storage, Azure Key Vault, Apache Airflow, Databricks Workflows
- **Modelling and Governance:** Star Schema and Dimensional Modelling, Medallion Architecture, SCD Type 1 and 2, Data Quality Frameworks, PII Masking, Data Lineage
- **Languages and DevOps:** SQL, Python, Java, Git, GitHub, Azure DevOps, CI/CD, Agile Scrum

EDUCATION

DATABRICKS CERTIFIED DATA ENGINEER ASSOCIATE

Credential ID 178312810, 2026

THE DATA & AI INSTITUTE | Melbourne

12-week Data & AI Program with industry internships, Jul 2026 - In progress

Guru Nanak Dev University | Amritsar

Master of Computer Applications (8.1/10 CGPA), 2016
